About

Designing a product is a game of balance more than drawing a pretty shape. I strongly believe in human centered design, first of all you should keep in mind the end user, without neglecting the technical and financial sides which are curtail to the development process.

In my designs I always aim for the perfect balance by using my vast technical experience and strong sense of aesthetics.

Experience

Industrial Designer

Studio PK LTD (2013 - Present)

- Concept development

Industrial Designer

Amir Kadouri design (2013 - 2018)

- Product development
- Freelance

Founder and Moderator

Hands on design workshop (2013 - 2018)

"Hands on design" workshop was found by a fellow industrial designer and me. The focus of the workshop is to introduce the field of industrial design to young entrepreneurs.

In collaboration with the Technion international school and the Jewish Journey, we created a two weekprogram over the span of a month that covered a concept to market simulation of developing a product, starting with brain storming ideas up to a design intention model with a complete business plan and go-to-market strategy.

Between 2013-2018 we had over 200 participants.

Experience

Computer Room manager

Hadassah Academic College (2012 - 2013)

I led a team of 9 instructors.

As a manager I was responsible for the training of the instructors and consult them in there work.
